This dataset contains the following files that can be ordered individually:

- PDF document "BEST Stations on Marine Regions", containing the list provided by BEST researchers of the 70 line and core stations mapped onto the marine regions
- binary file **bsierp\_regions.zip**, a zipped folder containing the shapefiles of both the polygons and points of the marine regions for ArcGIS users
- ASCII file **BSIERP\_regions\_bndrypts.csv**, a spreadsheet with the latitude/longitude points for each polygon corresponding to the different regions
- ASCII file **BSIERP\_regions\_onrho.csv**, a spreadsheet that has the list of xi\_eta rho points falling in each of the regions (this is specific to modelers who use ROMS output and want to calculate regional averages)
