1.0 DATA SET OVERVIEW:

1.1 Introduction or abstract

To clarify the energy and water cycle in the Tibetan Plateau, it is important to understand the characteristics of the basic meteorological elements and surface fluxes.

The purpose of gaize AWS (Automatic Weather Station) observation is to monitor these meteorological values.

1.2 Time period covered by the data

The First half CEOP EOP-3 time period (01 October 2002 to 31 March 2003).

1.3 Physical location (including lat/lon/elev) of the measurement or platform

Station name	Lat.(deg.)	Long. (deg.)	Alt.(m)	Measurement interval

3.0 DATA COLLECTION AND PROCESSING:

Surface radiation temperature is measured by radiation thermometer.

Soil moisture is measured by using Trime EZ sensor. Trime EZ is applied to TDR (Time Domain Reflectometry) method. The principle of the TDR is based on measuring the propagation time of an electromagnetic pulse along measuring pins in the sample. The propagation time depends on the humidity content of the medium to be measured.
